

TEJAS RAO PAPANNAGARI

+91 9121019200 · tejasraop@gmail.com

Education

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY

December 2021 – Present

Bachelor of Technology, Computer Science and Engineering

GPA: 7.0

EXCELLENCIA JUNIOR COLLEGE

June 2019 – May 2021

Intermediate, MPC

Percentage: 90%

PALLAVI MODEL SCHOOL

March 2019

CBSE

GPA: 8.6

Technical Skills and Certifications

Certifications: IBM R for data science, AWS data engineering, HP life cyber security

Programming: Python, SQL, CPP, Node js

Data Analysis/Machine Learning: Scikit-learn, Pandas, NumPy, Tensorflow, PyTorch

Work experience

LAKHI INFORMATION TECHNOLOGY

Data and AI engineer

August 2025-present

- Built and enhanced an AI-powered omnichannel communication platform spanning Web Chat, WhatsApp, Email, Voice, and Video channels for healthcare, hospitality, and telecom use cases.
- Designed AI orchestration workflows using A2A architecture, implementing 4 specialized agents with platform-aware routing, domain-specific execution, and long-term memory management.
- Developed AI-driven booking automation workflows through direct platform integrations and agent-based orchestration across multiple customer channels.
- Implemented observability and monitoring using OpenTelemetry, Prometheus, and Grafana, improving distributed tracing, metrics visibility, and operational insights.
- Developed real-time communication workflows using FastAPI, WebSockets, LiveKit, Twilio, webhooks, and REST APIs to support AI-powered customer interactions.

INTONE NETWORKS

February 2025 – August 2025

Data Science Intern

- Building an auditing dashboard using Grafana to visualize and monitor key project metrics
- Integrating a Retrieval-Augmented Generation (RAG) model with a local data file to enhance LLM-based responses

Projects

DEEP INCIDENT PILOT

- Currently developing a text summarization model to generate concise summaries from large textual data using both extractive and abstractive methods
- Implementing deep learning architectures such as T5, BART, GPT, and Seq2Seq with attention mechanisms for improved summarization performance.
- Built a data-driven AI incident response workflow simulator using FastAPI.
- Designed a workflow orchestration engine supporting tool execution, retry handling, human approval checkpoints, and execution tracing.

TEXT SUMMARIZATION USING DEEP LEARNING

- Currently developing a text summarization model to generate concise summaries from large textual data using both extractive and abstractive methods
- Implementing deep learning architectures such as T5, BART, GPT, and Seq2Seq with attention mechanisms for improved summarization performance.

GOOGLE AI-ML (Virtual Internship)

- Developed a machine learning model using Random Forest to predict insurance premiums based on customer demographics, health metrics, and policy details

Leadership

President, Esports Club

August 2023 – September 2024

- Led recruitment, training, and team strategy as President, guiding the Esports Club to multiple tournament wins and improved team performance
- Organized events and managed club operations, fostering a collaborative and competitive gaming environment
